Here you will be redirected to a URL where you need to log in to your account first. If you don't have an account, you will be directly registered. Click to log in

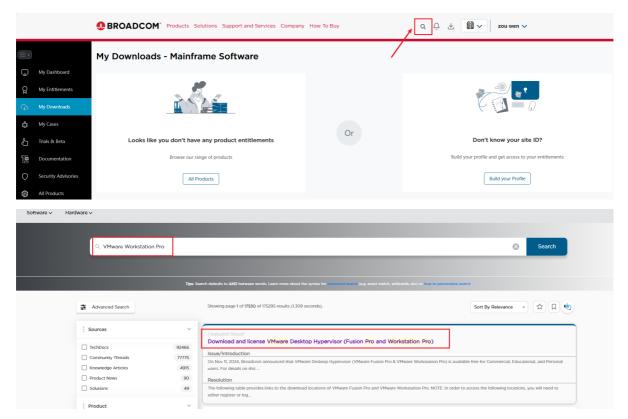

After logging in, you can see the My Downloads page. Search VMware Workstation in the search box to find the software we need to download

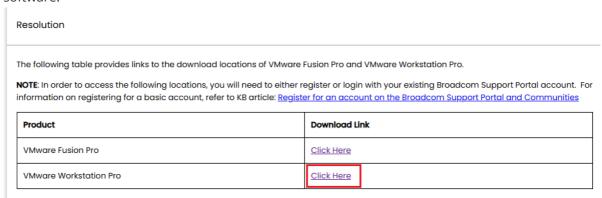

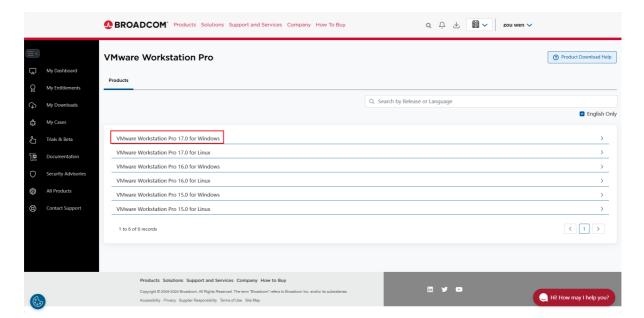

If the page after logging in is as follows, you cannot enter VMware Cloud Foundation page, search as follows or directly use the software provided in our materials

Click the search icon in the upper right corner, jump to the search page, search for VMware Workstation Pro, and click the first article to enter

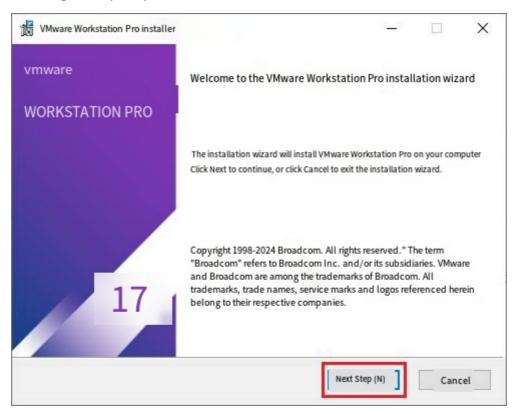

Scroll down to find the product download link, click to enter and you can see more versions of the software.

Here we take VMware Workstation Pro 17.6.2 under Windows as an example. After downloading, double-click to run the VMware virtual machine file, and then install the virtual machine software according to the prompts.

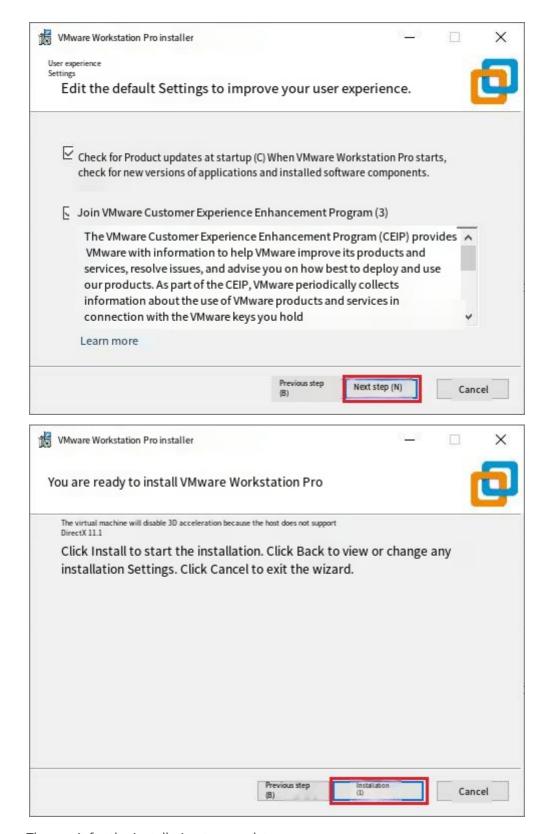

Previous step (B)

Next step (N)

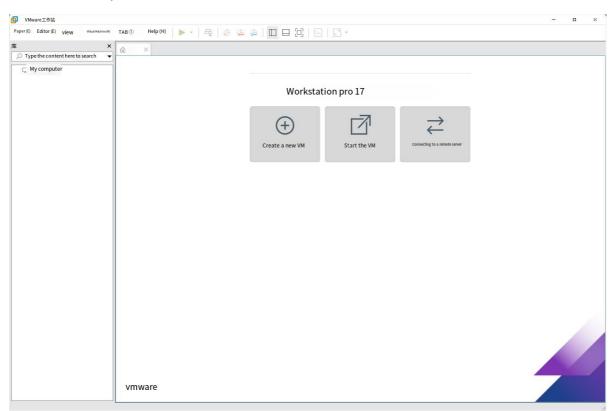

Cancel

Then wait for the installation to complete

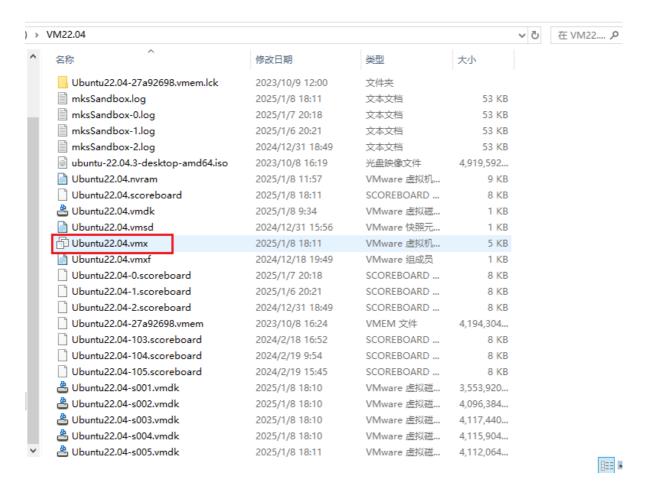

Double-click to open

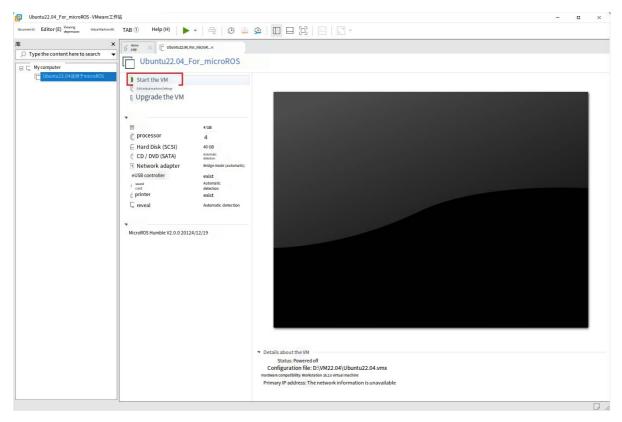

2. Start the virtual machine system

Use the virtual machine software to open the virtual machine system file in the data.

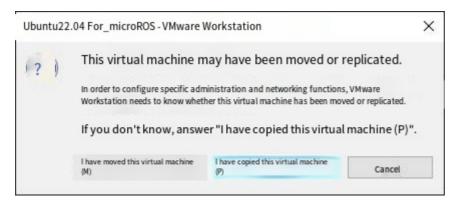

Find the decompressed virtual machine file path and select the Ubuntu22.04.vmx file.

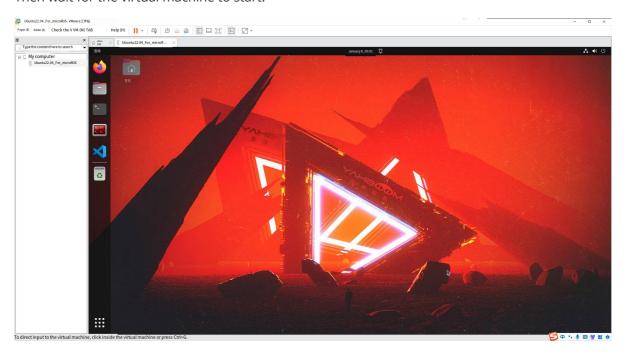

Select the virtual machine name and click to start this virtual machine.

If it is the first time to open the virtual machine, the following window will be prompted. Click 'I have copied this virtual machine'.

Then wait for the virtual machine to start.

3. System username and password

The virtual machine system of the product is Ubuntu 22.04, and the username and password are as follows:

Username: yahboom

Password: yahboom

4. Check the IP address of the virtual machine

Open the system terminal and enter the command to query the IP address. Usually, inet under ens33 is the IP address of the current virtual machine.

ifconfig
